

HOW CAN THE UNFCCC AND LOSS AND DAMAGE MECHANISM CATALYSE LASTING SOLUTIONS TO DISPLACEMENT IN THE CONTEXT OF CLIMATE CHANGE?

What can Loss and Damage mechanisms learn from durable solutions work in countries facing displacement and the impacts of climate change? What experiences and support can intergovernmental agencies contribute to the mainstreaming of “durable solutions” across UNFCCC and at the State level?

This event will explore the intersection between the policy and operational agendas on Loss and Damage and Durable Solutions and discuss overlaps and synergies in the development of the Loss and Damage architecture. The panel discussion will build on important themes in the just-published brief, [It's Time for Solutions: Addressing Displacement and Other Human Mobility Challenges in the Context of Climate Change Loss and Damage](#).
