

SUPPORTING RESILIENCE AND FACILITATING SAFE AND REGULAR MIGRATION PATHWAYS IN A CHANGING CLIMATE: LESSONS LEARNED FROM GCM IMPLEMENTATION

Every year, millions are displaced or compelled to move in the context of disasters and the intensifying adverse effects of climate change. Unless these movements are safe, orderly, and regular, they pose significant challenges to human security and human rights, and can undermine sustainable development, climate change adaptation and disaster risk reduction efforts.

At this official International Migration Review Forum (IMRF) side event, high-level speakers will assess the implementation of the Global Compact for Migration (GCM), with a specific focus on Objectives 2 and 5. The panel will showcase effective practices for regular migration pathways in disaster and climate change contexts and present the updated [CLIMB database](#), an online repository of policy and legal instruments addressing human mobility in the context of climate change.

Join us for a dialogue on practical solutions to bridge implementation gaps and strengthen partnerships across local, national, and regional levels.
